PROFILE

Full-Stack Developer experienced in building SaaS platforms, enterprise web applications, and customer-facing management systems. Strong background in React, Next.js, .NET, SQL, Azure Web Services, and full product lifecycle development. Focused on building secure, scalable, and maintainable software solutions that solve real business problems. Actively leveraging AI-assisted development workflows to improve learning speed, debugging, refactoring, and engineering productivity.

EMPLOYMENT HISTORY

Nov 2024 — Ongoing
Full-Time

Full Stack Developer, ithinkso

- Delivered and launched 1 live SaaS management platform for membership-based businesses, including sports clubs, music courses, and educational institutions.
- Owned 6+ core operational workflows, including member management, payment tracking, reporting, scheduling, reservations, and role-based access control.
- Built role-based application flows for 5+ user types, enabling administrators, trainers, members, parents, and institution staff to manage business-critical processes.
- Structured modular product features that allowed clients to adapt the platform to their operational needs without additional software dependencies.
- Applied encryption-based data protection practices to secure sensitive customer, financial, and operational data.
- Contributed across the full product lifecycle, from requirement analysis and system design to implementation, deployment, and live customer usage.

Feb 2023 — May 2023
Remote

Full Stack Developer Intern, Mims Yazılım A.Ş.

- Contributed to a production-ready enterprise web application using Next.js, SQL, Tailwind CSS, Prisma, and modern web technologies.
- Co-authored an in-house component library that helped reduce development time and accelerate delivery by 50%.
- Engineered an in-app window system that improved navigation efficiency and enabled users to work across multiple application views.
- Enhanced a custom form validation library to improve data accuracy, input consistency, and overall user experience.
-

May 2022 — Sep 2022
Istanbul

Full Stack Developer Intern, Secube Teknoloji AR-GE A.Ş.

- Supported the development of enterprise software solutions using .NET, SQL, WPF, and DevExpress.
- Assisted in building database-driven business applications focused on maintainability, scalability, and operational efficiency.
- Participated in project planning, implementation, testing, and team-based delivery processes.
- Gained hands-on experience with structured enterprise workflows, integrated software systems, and desktop application development.

PROJECTS

LUMO — SaaS Management Platform for Sports Schools and Educational Institutions **Live Product | SaaS | Full-Stack Development**

A cloud-based management platform developed for sports clubs, music courses, private education centers, and membership-based institutions. The platform combines member management, class scheduling, field reservations, trainer planning, payment tracking, attendance, and communication workflows in a single system.

- Developed backend modules with .NET for membership management, payment tracking, trainer planning, reporting, scheduling, reservations, and operational workflows.
- Built role-based interfaces using Razor for administrators, trainers, members, parents, and institution staff.
- Designed and worked with relational database structures using MySQL/MariaDB for users, memberships, payments, schedules, reservations, and operational records.
- Managed GitHub-based CI/CD and local server deployment workflows to support controlled releases and maintain an organized delivery process.
- Contributed to a modular product structure that helps institutions reduce manual work, improve transparency, and manage daily operations from a single platform.

AresPipe — Shipyard and Industrial Pipe Production Tracking Platform **Live Product | Production Tracking | QR-Based Field Operations**

A modern production tracking application developed for shipyard and industrial pipe manufacturing processes. The system enables production teams to manage spools, pipelines, and work orders through mobile devices, access production data quickly via QR codes, and monitor field operations in real time.

- Developed digital workflows for spool, pipeline, and work order tracking in industrial production environments.
- Implemented QR code based access to help field teams quickly retrieve production and technical information.
- Built features for active job tracking, production status monitoring, mobile field management, and operational reporting.
- Worked with relational data structures to track production records, technical specifications, responsible workers, and process statuses.
- Helped improve production visibility, tracking accuracy, and operational efficiency for shipyard and pipe manufacturing processes.

Xperk — E-Commerce Website and Admin Management Panel **Live Product | E-Commerce | Admin Panel**

A live e-commerce platform with a dedicated admin panel that allows business users to manage products, sales, stock levels, orders, and operational processes from a single interface.

- Developed the customer-facing e-commerce website, including product listing, product detail, and sales-related workflows.
- Built and maintained an admin panel for managing products, stock, orders, sales records, and internal business operations.
- Designed database-driven workflows for product management, inventory tracking, order processing, and sales monitoring.
- Enabled non-technical business users to manage daily e-commerce operations through a structured admin interface.
- Contributed to a maintainable architecture separating storefront operations from internal management workflows.

EDUCATION

Sep 2019 — Jul 2023

Software Engineering, National Technical University Kharkiv Polytechnic Institute

SKILLS

JavaScript, React, Next.js, Razor, .NET, C#, PHP, REST APIs, SQL, MySQL/MariaDB, PostgreSQL, Git, CI/CD, SaaS Development, RBAC, E-Commerce, OpenCV

LANGUAGES

English, Russian
